CAREER SUMMARY

I am Senior Researcher at the Technische Universitaet Berlin and for 2019 Visiting Professor at the Vanvitelli University (Italy), working on technology and its wide effects on economic, social and cultural fields.

My work explores the relationship between technology and society, as well as the crucial topics of sustainable mobility and environmental studies, focusing on transitions and cultural shifts. Highlights of my career include Guest and visiting professorships and EU Marie Skłodowska Curie IEF fellowship.

I have brought in over US\$2.5+ million in research grants from national and international (both private and public) funding schemes, building a wide network with industries, public agencies and NGOs. As a project coordinator and research unit coordinator, I have opened meaningful international dialogue on issues of long-term assessment of technology and its transition toward a smart and sustainable future.

Currently I am editor-in-chief of *The Journal of Transport History*, where I have significantly transformed the journal, expanding from two to three editions annually, and overseeing the move to a new publisher. I am on the Editorial Board of three other international journals.

My prolific publications number 120+, encompassing books, including as editor and co-editor, and articles in international journals. I have co-organized and participated in 60+ national and international conferences. As an expert in the transport and mobility field, I have been appointed as a peer-referee for international academic journals, as well as an evaluator for American and European research institutes and centres.

I have conducted research and taught in universities in Italy, France and Germany.
